In response to applicant's amendment dated April 05, 2004. The following action is taken:

Claim 1 is rejected for the same reasons set forth in the previous office action mailed Jan 08, 2004 repeated herein.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claim 1 is rejected under 35 U.S.C. 102(e) as being anticipated by Wada et al (6480454).

The reference shows an optical disk recording and reproducing apparatus comprising: an aberration correction element 184 having a retardation member (liquid crystal) for selectively varying the phase difference of a polarized light beam based on the polarization direction as cited in column 20 lines 40-47.

Claims 2 and 3 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claims 4-47 are allowed.

Art Unit: 2655

Applicant's arguments filed April 05, 2004 have been fully considered but they are not persuasive. Applicant's arguments are centered on the prior art not showing or teaching, "selectively varying a phase difference of an incoming light beam according to a polarization of the incoming light beam". However the reference does show the use of a uniaxial birefringent optical element 184 that is based on a linearly polarized light beam that is parallel to the orientation of the liquid crystal 17. thus any phase difference correction is predicated on the linearly polarized light beam entering the optical element 184.

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.

Any inquiry concerning this communication should be directed to **NABIL Z HINDI** at telephone number (703) 308-1555.
